

Annual Service and Calibration

CSI understand the importance of having a good service and calibration record for your tablet coating equipment.

We currently conduct a number of annual service and calibration visits on various makes of tablet coating equipment.

All our visits are well documented on conclusion of the site work, with the following documentation included in a bound job folder.

Visit Report and Work Summary

Detailed Machine Checklist Results

Calibration Method Statement

Calibration Procedures

Calibration Certificates for Reference Equipment

Calibration Certificates for Process Loops

All of the above documents are bound and identified for easy future reference.

Additionally, within the machine checklist, we observed and record equipment performance values.

We reference machine operation, then, just like a car MOT, we advise on any possible sources of problems to prevent unscheduled down time.
